Empathy Map Canvas:

In the case of Book-A-Doctor, an empathy map was developed considering patients looking for qualified doctors and booking their appointments through a convenient method. Patients usually face frustrations such as long waiting times and lack of availability of appropriate specialists as well as inconvenient appointment booking processes. These patients expect to have an easy yet secure way of searching, scheduling, and tracking appointment bookings. At the same time, physicians are required to organize their appointment booking process, whereas the management needs tools to validate the physicians and track the activities performed on the platform. Considering this data, Book-A-Doctor came into being as a product that offers users secure authentication, physician validation, appointment booking features, and role-based dashboards.

Empathy Map (Detailed Analysis)

Who are empathizing with?

Person: A patient looking for medical consultation and healthcare services.

Situation: Needs to find a suitable doctor and book appointments easily.

Role: A patient who searches doctors, books appointments, and tracks appointment status on Book-A-Doctor.

Goal

To find and book appointments with verified doctors quickly and conveniently.

To receive timely medical consultation without long waiting times or complicated booking procedures.

What do they THINK and FEEL?

PAINS (Fears, Frustrations, Anxieties)

- Worried about finding qualified and trustworthy doctors.
- Frustrated by lengthy appointment booking processes.
- Anxious about delays in receiving medical care.
- Concerned about appointment cancellations and availability.

GAINS (Wants, Needs, Hopes, Dreams)

- Wants a fast and simple appointment booking experience.
- Hopes to find the right specialist quickly.
- Needs reliable appointment status updates.

Wants secure access to healthcare services online.

What do they HEAR?

Others say: Online healthcare services save time and effort.

Friends say: Booking appointments online is more convenient than visiting hospitals directly.

Family members say: Always consult verified and experienced doctors.

Second-hand: Many patients experience long waiting times in traditional appointment systems.

What do they SEE?

- Multiple doctors with different specializations.
- Online healthcare platforms and hospital websites.

- Doctor profiles, consultation fees, and experience details.
- Reviews and recommendations from other patients.

What do they SAY?

- I need an appointment as soon as possible.
- I want to consult a trusted doctor.
- Booking appointments should be simple and quick.

What do they DO?

- Search doctors by specialization.
- Compare doctor profiles and consultation fees.
- Book appointments online.
- Track appointment requests and status updates.

What other thoughts influence their behavior?

- Positive reviews increase confidence in choosing a doctor.
- Previous healthcare experiences influence booking decisions. □ Verified doctor profiles create trust in the platform.

What do they need to DO?

- Register and login securely.
- Search and select a suitable doctor.
- Choose an appointment date and time slot.
- Book and track appointments efficiently.
- Receive consultation without unnecessary delays.
