Problem – Solution Fit Canvas for Book A Doctor:

The Problem-Solution Fit Canvas was used to analyze the relationship between healthcare users and the solution provided by Book-A-Doctor. It aided in understanding the needs of both the patients and the doctors, appointment management problems, the behavior of users, limitations, and alternatives that exist. It further showed how Book-A-Doctor can solve these problems through its secure system of managing appointments.

Problem-Solution fit canvas 2.0

Purpose / Vision

Define CS, fit into CC 1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0-5 y.o. kids Patients seeking medical consultations. Doctors managing appointments. Administrators verifying doctors and monitoring the system.	Focus on J&P, tap into BE, understand RC 6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices Limited access to verified doctor information. Time-consuming appointment procedures. Lack of appointment status updates.	Explore AS, differentiate 5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking Hospital websites. Phone-based appointment booking. Other healthcare booking platforms.
Identify strong TR & EM 2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides. Find suitable doctors quickly. Book appointments online. Manage appointment requests efficiently. Reduce manual scheduling efforts.	Focus on J&P, tap into BE, understand RC 9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. Traditional appointment systems are inefficient. Patients struggle to find verified doctors. Appointment management is often manual.	Extract online & offline CH of BE 7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) DIRECTLY: Searches doctors online. Compares specialties and fees. Books appointment. INDIRECTLY: Reads reviews. Takes recommendations from friends and family.
Identify strong TR & EM 3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Need medical consultation. Need to find a specialist doctor	Identify strong TR & EM 10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour Book-A-Doctor is a MERN stack healthcare platform that allows patients to search verified doctors, book appointments, track appointment status, and enables doctors and administrators to manage healthcare interactions efficiently	Extract online & offline CH of BE 8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 Healthcare websites, Mobile devices, Search engines. 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Hospitals and clinics, Personal recommendations

Customer Segment (CS):

The intended customer segment for Book-A-Doctor is patients requiring a doctor's appointment, doctors who require a mechanism to manage appointments, and platform managers requiring an easy way to control platform operations. Patients require an easier means to identify doctors and make appointments, and doctors need a better means to manage their consultation processes.

Jobs-to-be-Done / Problems (J&P):

The three key responsibilities are to find qualified doctors, make online bookings, and handle appointment requests efficiently. The Book-A-Doctor solution fulfills these requirements by including a doctor searching feature, appointment scheduling, appointment tracking, and doctor approval/disapproval services.

Triggers (TR):

Some of the primary factors that compel users to look for a better solution are problems locating certified physicians, time consumed while making appointments, and the tedious process of booking an appointment. In response to these challenges, Book-A-Doctor offers a single platform for finding doctors and scheduling appointments.

Emotions Before / After (EM):

Before signing up for Book-A-Doctor, patients usually have a feeling of frustration, anxiety, and uncertainty in terms of finding credible health practitioners. After the experience on the platform, however, patients feel a sense of confidence and satisfaction because of being able to find and book doctors effectively.

Available Solutions (AS):

These include existing platforms like hospital websites, telephone booking systems for appointments, among others. The problem with these solutions is that they are time consuming and complicated. Book-A-Doctor bridges the gap through a system that is easy-to-use and convenient.

Customer Constraints (CC):

The key constraints include restricted access to credible doctors' data, time spent making an appointment, and non-tracked appointments. Book-A-Doctor solves these constraints by having credible doctors' information, authentication processes, and appointment management.

Behavior (BE):

Patients will look for physicians themselves, choose the specialties and costs for consultations, and book an appointment. Patients can indirectly engage in looking at feedback about particular doctors, taking recommendation from family and friends, comparing different options for their health care. These activities are covered by Book-A-Doctor.

Channels of Behavior (CH):

The online channels include medical sites, search engines, mobile device applications for scheduling appointments. Offline channels involve hospitals, clinics, and recommendations from family and friends. The target audience of Book-A-Doctor uses both these channels equally.

Problem Root Causes (RC):

The reason for the problem lies in the fact that there is no single platform for managing patientdoctor-administrator relations effectively and easily. The traditional way of scheduling appointments takes much more time than it should and includes many unnecessary processes. Book-A-Doctor has been created with the aim of overcoming these obstacles.

Your Solution(SL):

Book-A-Doctor is a healthcare platform built using MERN Stack that addresses the issue. The platform allows patients to choose certified doctors, book appointments, check their statuses, while physicians can respond to consultation requests and administrators can manage doctors and system activities.
